

**Kansas City River Market District Parking Audit
Final Progress Report
Delivered to Smart Growth America on December 18, 2017
From: Bruce Campbell, CAPP KCMO Parking Services – Public Works
EPA Building Blocks TA**

- **Parking Meter Demo:** The city’s parking meter demonstration began in September. The River Market participating parking vendor, Cale, installed smart parking meters on-street in the River Market. Other participating vendors who installed smart parking meters in other parts of downtown are IPS, Parkeon and MacKay. The demonstration was extended for 30 days and will be completed in January 2018.
- **Parking Enforcement:** The City selected LAZ Parking for parking enforcement management through a public solicitation/procurement process and contemplates executing a parking enforcement and meter operations contract effective January 1st. The kcmo.gov/publicworks/rivermarketparking site will be updated accordingly.
- **Paid Parking in Public Surface Lots:** Also effective in January, there are plans to charge for parking in off-street public parking lots managed by the City Market. The kcmo.gov/publicworks/rivermarketparking site will be updated accordingly.
- **Parking Data Analytics:** The City is moving forward with a planned parking data analytic platform. The procurement process will be wrapped into “smart city” efforts within the city’s Office of Innovation. We will be looking for a company that can help us develop a data analytics platform for both internal tracking and external services such as real time parking availability, etc.
